# OVERVIEW & INTRODUCTION

- Task: Get an input string from the user in the form of 1's and 0's and convert it to a list of Integers, and then an actual binary number.
- This lesson and Lab is to bring together the basic Python constructs, including:
  - Conditional IF statements
  - For loops
  - While Loops
- Using Top Down design flow to break a coding problem down

# RESOURCES & MATERIALS NEEDED

- Raspberry Pi or Laptop to with Python 3 installed and updated
- Interactive Notebook or Google doc to create Top Down design flow diagram

# WHAT YOU WILL KNOW...

- Prior Knowledge
  - How to open and run Python on a Raspberry Pi or other device
  - Familiarity with Python constructs like if, elif, else, while, for loops
  - Debugging skills to break down a python coding challenge
- What You Will Know & Be Able To Do
  - Use your Debugging skill to construct a top down flowchart to describe the python coding challenge
  - Implement Python code to solve the coding challenge
  - Describe to classmates how you solved the coding challenge

# HOW WILL YOU BE MEASURED

- Individual Students will submit working code
- Students teams will present diagram of Top Down design flow chart, and this will be graded
- Students teams will present orally how they solved the coding challenge, and depth of understanding will be graded

# NEW WORDS...

- Binary

# INTRODUCTION - THE CODING TASK

- Get a input string from the user that is only 1's and 0's
- Convert it to a list of integer values
- Then convert it to an actual Binary number

Identify the smaller tasks of this challenge, and create a modular flow diagram

Implement the code in a modular function based method that will allow for easy modification

# FIRST CHALLENGE - GET AN INPUT

- Challenge 1: - Get a input string from the user that is only 1's and 0's, Then Convert it to a list of integer values

```
STEAM-Clown@STEAM-Clown-PC ~/myPython
$ python3 logicworkCellSimulation.py
Enter a Binary value 10011100
This is the Input String: 10011100
This is the Input as a List of numbers: [1, 0, 0, 1, 1, 1, 0, 0]

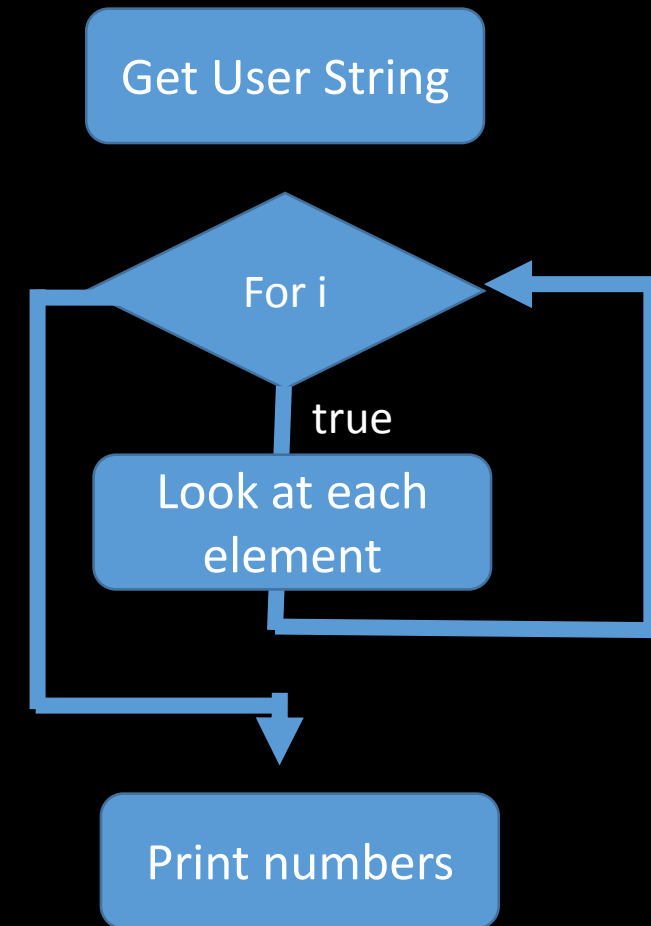

STEAM-Clown@STEAM-Clown-PC ~/myPython
$ |
```

- Before you run off to Google to find code, please take some time to solve this on your own.

Hint:

# BREAK THE PROBLEM DOWN

- Get User input string
- Create a Loop to walk through the input string and convert each element to an integer number
- Print the numbers

Answer Slide – Post after Students have had a chance to work the challenge

# CHALLENGE 2- NOW MAKE A DECISION IF BIT ELEMENT 3 IS A 1

- Print something if a specific bit is “asserted”
  - If bit 7 is a 1, then print something

```
STEAM-Clown@STEAM-Clown-PC ~/myPython
$ python3 logicworkCellSimulation.py
Enter a Binary value 11010001
This is the Input String: 11010001
This is the Input as a List of numbers: [1, 1, 0, 1, 0, 0, 0, 1]
bit 7 is a 1
```

Hint: if you need help understanding the median see: <https://www.khanacademy.org/>

# CHALLENGE 3- NOW MAKE A DECISION IF 2 BITS ARE SOMETHING

- Print something if a 2 bits are what you expect
  - If bit 6 and 7 are expected, then do something

```
STEAM-Clown@STEAM-Clown-PC ~/myPython
$ python3 logicworkCellSimulation.py
Enter a Binary value 10011110
This is the Input String: 10011110
This is the Input as a List of numbers: [1, 0, 0, 1, 1, 1, 1, 0]
Turn Right Motor on forward 1 0

STEAM-Clown@STEAM-Clown-PC ~/myPython
$
```

Hint: if you need help understanding the median see: <https://www.khanacademy.org/>

# CHALLENGE 3- NOW MAKE A DECISION IF 2 BITS ARE SOMETHING

- See where I'm going with this?

```
STEAM-Clown@STEAM-Clown-PC ~/myPython
$ python3 logicworkCellsimulation.py
Enter a Binary value 11010110
This is the Input String: 11010110
This is the Input as a List of numbers: [1, 1, 0, 1, 0, 1, 1, 0]
Turn Right Motor on forward 1 0
Turn Left Motor on reverse 0 1

STEAM-Clown@STEAM-Clown-PC ~/myPython
$ |
```

Hint: if you need help understanding the median see: <https://www.khanacademy.org/>

# CHALLENGE 4 - NOW MAKE THE INT NUMBERS ACTUALLY A BINARY NUMBER

- Convert the List of integer 1's and 0's to an actual binary number... Mr. Burnham has not figured this out
- Why? So you can do bitwise operations on the binary number

Hint: [https://www.tutorialspoint.com/python/bitwise\\_operators\\_example.htm](https://www.tutorialspoint.com/python/bitwise_operators_example.htm)

# ASSESSMENT

- Assessment Type(s):
  - ✓ Demonstrations
  - ✓ Rubrics
- C = working challenge 1 code
- B- = working challenge 2 code
- B+ = working challenge 3 code
- A = working challenge 4 code

Turn in

1. Link to Code (this can be github, google docs, or upload txt files)

+1 extra point = add odd random set of numbers rather than user input
